

Ethical considerations

Guidelines for Authors

Ethical considerations are of utmost importance in scholarly publishing and manuscript submission to the Journal of Premier Research. Authors are expected to uphold high ethical standards throughout the research and publication process. Here's an in-depth overview of ethical considerations for authors:

1. **Plagiarism:** Authors must ensure the originality of their submissions and avoid any form of plagiarism. This includes refraining from using verbatim text from other sources without proper attribution. All sources should be cited appropriately, and authors should not submit work that has been previously published or is under consideration elsewhere.

2. **Authorship Criteria:** Authors should adhere to established criteria for authorship and contributorship. Only individuals who have made significant contributions to the research or manuscript should be listed as authors. Conversely, those who have not substantially contributed should be acknowledged appropriately but not listed as authors. Authors must agree on the order of authorship and ensure all co-authors approve the final manuscript.

3. **Conflicts of Interest:** Authors must disclose any potential conflicts of interest that could influence the interpretation or presentation of research findings. This may include financial relationships, personal connections, institutional affiliations, or competing interests related to the research or publication. Authors should transparently declare any conflicts of interest at the time of manuscript submission.

4. **Compliance with Ethical Standards and Guidelines:** Authors conducting research involving human subjects, animals, or sensitive data must comply with ethical standards and guidelines. This entails obtaining informed consent from human participants, ensuring the ethical treatment of animals, and safeguarding the confidentiality of sensitive information. Authors should provide details of ethical approval or exemption from an institutional review board (IRB) or ethics committee in the manuscript.

5. **Data Integrity and Transparency:** Authors should maintain the integrity and accuracy of research data and findings presented in the manuscript. Data collection, analysis, and reporting should be conducted transparently, with appropriate documentation and validation methods. Authors should be prepared to provide access to raw data and materials upon request and maintain records of research procedures and outcomes.

6. **Acknowledgment of Funding Sources:** Authors should acknowledge any funding sources or financial support received for the research presented in the manuscript. Funding agencies or sponsors should be credited appropriately, and authors should disclose any potential influence of funding sources on the research or publication.

7. **Adherence to Editorial Policies:** Authors should familiarize themselves with the editorial policies and submission guidelines of the Journal of Premier Research and ensure their submissions comply with these policies. This includes adhering to formatting requirements,

citation styles, manuscript preparation guidelines, and any specific instructions for authors provided by the journal.

By adhering to these ethical considerations, authors uphold the integrity, credibility, and professionalism of their research, contributing to the advancement of knowledge in the field of clinical performance evaluation and malpractice prevention. Violations of ethical standards may result in rejection of the manuscript or other disciplinary actions by the journal's editorial board.
